

Technowood®

TRA Essentials

TRA ESSENTIALS

When performing procedures via transradial access (TRA), a proper setup is essential for a successful case.

Technowood's TRA Essentials provides a stable platform to support the arm and exposes the radial artery for easy visualization and access.

- ✓ **Quick Setup**
Simply slide the platform between the table and cushion
- ✓ **Stable Support**
Curved design hyperextends the wrist for easy radial access
- ✓ **Improved Patient Experience**
Allows the patient to be comfortable throughout the procedure while maintaining optimal position

Whether it's a transradial or transbrachial approach for CAG, PCI or PTA, we use Technowood's TRA Essentials here in our hospital. Placing the patient's arm on it makes it easy for us to view and access the puncture site. Since the arm's position is secure throughout the procedure, we can smoothly finish the case.

Dr. Tooru Kataoka
Cardiology Department Head
Bell Land General Hospital
Osaka, Japan
